

ASSIGNMENT - 3

Familiarization of 8086 microprocessor Kit/Simulator and assembly language programming using 8086A microprocessor/Simulator for:

c) Shifting a block of data from one memory location to another

Address	Mnemonics	Comments
4000	MOV CL, 0Ah	Load CL Reg. with 0Ah.
4002	MOV SI, 2000	Load SI Reg. with Content of mem loc. 2000h.
4005	MOV DI, 3000	Load DI Reg. with Content of mem loc. 3000h.
4008	MOVSB	Load DI Reg. with the Content of SI Reg. or the String byte of SI Reg.
4009	Loop 4008	Jump to 4008h if CL Reg. Content is non-zero.
400C	INT 3	Stop execution.

INPUT:

2000h : 11h
 2001h : 22h
 2002h : 33h
 2003h : 44h
 2004h : 55h
 2005h : 66h
 2006h : 77h
 2007h : 88h
 2008h : 99h
 2009h : AAh

OUTPUT:

3000h : 11h
 3001h : 22h
 3002h : 33h
 3003h : 44h
 3004h : 55h
 3005h : 66h
 3006h : 77h
 3007h : 88h
 3008h : 99h
 3009h : AAh

- 2) Add two 32 bit Hex numbers with help of 8086 upto

Address	Mnemonics	Comments
3000	MOV AX, 0001H	Load Reg. Ax with 0001H
3003	MOV BX, FFFFH	Load Reg. Bx with FFFFH
3006	MOV CX, FFFFH	Load Reg. Cx with FFFFH
3009	MOV DX, 0004H	Load Reg. Dx with 0004H
300C	ADD AX, CX	Add the content of Ax and Cx
300E	ADC BX, DX	Add the content of Bx and Dx
3010	JNC 3014H	Jump if no Carry to 1014H
3012	INC DH	Increase the value of DH Reg.
3014	INT 3	Stop execution -

INPUT:-

1st No. { AX ← 0001H CX ← FFFFH } 2nd No.
 BX ← FFFFH DX ← 0004H }

OUTPUT:-

AX ← 0000H → Lower bit

BX ← 0003H → Higher bit

DH ← 01H → Carry

4) Find the Largest number from an array with the help of a 8086 lpo.

Address	Mnemonics	Comments
3000	MOV CL, 09	Load CL Reg. with 09H
3002	MOV SI, 2000	Load SI Reg. with content of mem loc. 2000H.
3005	MOV AH, [SI]	Move the content of SI Reg to AH Reg
3007	INC SI	Increase the Content of SI Reg. with content of next mem loc.
3008	CMP AH, [SI]	Compare the Content of SI and AH Reg.
300A	JNC 300E	If no carry jump to 300EH mem loc.
300C	MOV AH, [SI]	Move [SI] Reg content to AH Reg.
300E	DEC CL	Decrease the Content of CL Reg.
300F	JNZ 3007	If non zero jump to 3007H loc.
3011	INT 3	Stop execution.

INPUT:-

2000H: 00H · 2001H: 11H 2002H: 22H 2003H: 55H 2004H: 44H

OUTPUT:-

AH = 55H

Note: To

Teacher's Signature

ADC 0809 is interfaced with μ proc 8086 via PPI 8255A.

Address	Mnemonics	Comments
3000	MOV AL, 91	Load AL Reg with 91h
3002	MOV DX, 0067	DX Reg is pointing to 0067 odd location
3005	OUT DX, AL	AL Reg Content is copied to DX ^{CVR} Reg.
3006	MOV AL, 05	Load AL Reg with 05h.
3008	MOV DX, 0063	DX Reg is pointing to 0063 mem. loc.
300B	OUT DX, AL	AL Reg Content is copied on to port B
300C	MOV AL, 04	Load AL Reg with 04h.
300E	MOV DX, 0063	DX Reg. is pointing to 0063 mem. loc.
3011	OUT DX, AL	AL Reg Content is copied on to port B
3012	MOV DX, 0065	DX Reg is pointing to 0065 mem. loc.
3015	IN AL, DX	Content of Port C is now available in AL.
3016	ROR AL, 1	Rotate right the content of AL Reg 1 time.
3018	JNC 3015	If no carry move to 3015
301A	MOV AL, 06	Load AL Reg with 06
301C	MOV DX, 0063	DX Reg is pointing to 0063 mem. loc.
301F	OUT DX, AL	Content of AL Reg is copied onto port B
3020	MOV DX, 0061	DX Reg is pointing to 0061 mem. loc.
3023	IN AL, DX	Port A Content is now available in AL.
3024	INT 3	End of execution.

INPUT OUTPUT

2.5 V 80h

4 V C3h

5 V F3h
